AI-Powered Accounting for Africa

AI-driven Accounting & Tax Automation
SYSCOHADA · Senegal & OHADA Zone (17 countries)

GITEX AFRICA 2026 · Marrakech

The Problem

80% of African accountants' time is spent on manual data entry

Massive manual entry

Hundreds of invoices processed by hand every month

Costly tax errors

Tax penalties, permanent non-compliance risks

Impossible to scale

Growth capped by manually processable volume

Inadequate tools

Sage, Cegid, Excel: no local tax automation

The Kora Metrics Solution

Humans always decide. AI proposes, the professional validates.

01

Digitization & Extraction

Upload invoices (PDF, scans, photos).
AI automatically extracts all data.

02

AI Tax Analysis

SYSCOHADA allocation, tax identification,
real-time anomaly detection.

03

Ready-made Declarations

Auto-generate VAT, CIT, withholdings.
Professional validates and submits.

Why Now?

Tax Digitalization

Senegal accelerating electronic tax declarations

AI Revolution

LLMs finally enable document analysis at scale

New Generation

Digital-native accountants seeking modern tools

Competitive Void

Zero competitors on OCR → SYSCOHADA → Local declarations chain

Traction & Proof

70-80%
time savings
proven on MVP

4
functional
AI modules

3
committed
accounting firms

17
addressable
OHADA countries
